

MAKING THE GRADE IN **COFFEE MACHINE** APPLICATIONS

NEXT GENERATION SOLUTIONS WITH
VICTREX™ PEEK POLYMERS

DELIVERING TOMORROW'S GENERATION OF FOOD GRADE SOLUTIONS. TODAY.

With increasing demands around health and safety, hygiene and productivity, the pressures being faced by food and beverage manufacturing equipment companies are mounting. Food contact legislation. Cleaning processes. Equipment performance. Precision. Efficiency. Improvements need to be made without compromise to reliability, costs or output.

Therefore, developing the next generation of food manufacturing equipment is a complex challenge. It requires modern materials and close collaboration between product and design engineers to develop cost-effective, innovative solutions that make the grade in terms of performance and regulatory approval.

Victrex has been helping food manufacturing companies work with thermoplastics for more than two decades. Delivering high-performance solutions that can improve the reliability, efficiency and cost-effectiveness of food contact components, to help solve current challenges in processes from milling and mixing, to boiling, frying and freezing.

In combining food contact compliant VICTREX™ PEEK polymer-based solutions with our in-depth material, processing and application know-how, we help you address your most pressing challenges and bring your food contact solutions to market faster and with more confidence.

SHAPING COFFEE CONTACT APPLICATIONS

From the smallest components to whole processes, Victrex PEEK-based solutions are used throughout the coffee, beverage and water contact world.

These solutions can help to reduce component costs – for example through replacing metal components with the mass production of complex, resilient, injection-moulded components that require no further processing or machining.

Typical applications include:

▲ FLUID DISPENSING

- Flow meters & sensors
- Nozzles and dispensers
- Piercing devices
- Check valves & solenoids
- CIP equipment
- Frothing wand

▲ FLUID HANDLING

- Pumps & drive gears
- Filters
- Fittings, junctions & seals
- Pipes & hoses
- Reservoirs
- Bushing & bearings
- Non-stick coatings

DELIVERING REGULATORY COMPLIANCE

The regulatory landscape is becoming increasingly complex, to protect the consumer and implement social and environmental standards. Combined with regulatory requirements in food, drink and potable water being constantly updated and becoming more stringent, it is challenging to keep up to speed on which materials can and cannot be used.

To bring clarity, we work closely with industry and regulatory bodies, undertaking our own advanced research and development, testing and securing the relevant regulatory compliance under, for example EU regulations, U.S. Food and Drug Administration (FDA), UK Water Regulations Advisory Scheme Ltd (WRAS) and KTW.

We understand that your products simply have to work, within the regulatory landscape of today and tomorrow. So we can help at each stage of the product lifecycle, to not just keep your machines working overtime, but to help you realise opportunities, by bringing new products to market, safely and quickly.

VICTREX FG™ REGULATORY COMPLIANCE GRID

VICTREX FG™ series of VICTREX™ PEEK products are compliant to major regional food contact regulatory standards and regulations. Safe in the knowledge that the materials comply with the strictest regulatory requirements, the portfolio offers design freedom to product managers, designers, engineers and plant managers.

Updated as of November 2021. This is to provide a brief summary of regulatory compliance of VICTREX FG™ product family and subject to update. Please contact Victrex team for the most updated information.

VICTREX FG™ PRODUCT FAMILY

VICTREX FG™ meets the most stringent food contact material requirements (including safety, quality and regulatory compliance) of the industry – to ensure that customers only taste what they are supposed to taste.

Product portfolio overview

	100 SERIES	200 SERIES		300 SERIES
FILLER	Strong & stiff enough to replace metal & stay in shape in extreme environments.	Tough & ductile enough to withstand hard knocks in demanding environments.	PERFORMANCE	Resilient enough to reduce friction & wear, extending component lifetime in challenging environments.
CARBON FIBRE	VICTREX FG™ 140	VICTREX FG™ 240	BEST	CARBON FIBRE VICTREX FG™ 340
GLASS	VICTREX FG™ 121		BETTER	PTFE VICTREX FG™ 325
	VICTREX FG™ 120			CARBON FIBRE VICTREX FG™ 320

EXPERIENCE THE BENEFITS

Victrex works with a wide spectrum of food and beverage customers to solve complex challenges and provide certified food contact materials for the most exacting conditions. From cereal conveyor systems and power unit engines, to cutter tool manufacturers in confectionery production. From drinks production component providers to industrial cleaning equipment manufacturers. We are helping to upgrade performance, efficiency and cost-effectiveness in demanding food grade environments.

WE ARE THE #1 EXPERTS IN PEEK

Our expertise enables us to support every stage of application development, helping manufacturers bring new products to market, safely and quickly.

WE PIONEER TO HELP IMPROVE PERFORMANCE

We are helping customers improve the chemical resistance and purity of their critical food contact applications while providing compliance with food and water standards and regulations, including EU, FDA and WRAS.

WE COLLABORATE TO DRIVE COSTS DOWN

We partner with OEMs and Tier 1s to reduce component cost and improve performance, through identifying where they can gain most advantage in replacing metal with PEEK.

HIGH PERFORMANCE PRODUCT PORTFOLIO

POLYMERS,
FORMS,
PARTS.

With over 40 years of PEEK polymer knowledge, Victrex works with customers to design new solutions – often replacing metal – to improve manufacturing performance, reduce costs and meet the unique needs of coffee contact environments.

Today, manufacturers are adopting high performance polymers to meet their needs in demanding applications.

▲ VICTREX™ PEEK POLYMER

The ideal metal replacement material, VICTREX PEEK is durable and reliable. Enabling optimum component design and performance across a range of next-generation coffee grade applications.

70% lighter vs. steel
55% lighter vs. titanium
40% lighter vs. aluminium

Injection moulding unfilled, carbon-fibre reinforced, and glass-filled grades

Proprietary grades available to achieve high mechanical strength, minimal wear and extreme temperature resistance

▲ VICOTE™ COATINGS

Durable VICTREX PEEK coatings enhance the lifetime of metal substrates while being friendly to the environment. Enhance the performance of your components with VICTREX PEEK coatings.

A one-coat system for a smooth, uniform surface

Excellent resistance to wear, abrasion, extreme temperature, creep, and chemicals

Halogen-free* with no additives

▲ ZYEX™ FIBRES

ZYEX PEEK fibre is the thermoplastic fibre of choice for tough environments. Its resistance to high temperatures and a wide range of chemicals, together with its excellent abrasion resistance at high temperatures make PEEK fibres an excellent choice for e.g. filtration applications, conveyors and composites.

Monofilament, multifilament, staple and cut fibres

Available in diameters from 10 to 2000 microns

▲ APTIV™ FILMS

Take advantage of the properties of VICTREX PEEK in a thin film format for demanding applications. By offering excellent mechanical, thermal and electrical properties, APTIV Film allows for cost-effective, reliable insulation solutions.

Superior mechanical and dielectric strength

Excellent thermal conductivity

Available in thicknesses from 5 to 750 microns

▲ VICTREX GEAR SOLUTIONS

Benefit from a 360° system approach spanning from material selection through gear design to mass production of precision-moulded state-of-the-art gears that meet highest requirements and can deliver a range of benefits.

Accelerate time to market with integrated process

68% lighter vs. cast iron gears

Cost saving potential vs. metal scissor gears

* VICTREX™ products have been shown through type testing to meet the criteria of 'non-halogenated' as defined in IEC standard – IEC 61249-2-21.

OVERCOMING MARKET CHALLENGES

The inefficiencies inherent with many existing coffee and beverage manufacturing practices and components often mean that a diverse range of costly and complex challenges must be overcome to ensure production can reach and maintain optimum efficiency at the lowest possible lifetime cost.

- ▲ **Machining / components requiring frequent maintenance**
- ▲ **Metal components being susceptible to contamination and flaking**
- ▲ **Component deterioration through exposure to extreme temperatures and chemical damage**
- ▲ **Contamination from lubricants necessary for moving parts**
- ▲ **Staining and other issues associated with maintaining aesthetics**

VICTREX™ PEEK polymers

One of the highest performing polymers in the world, VICTREX PEEK is ideally suited to these extreme, demanding environments. Whilst alternative materials can meet some needs, PEEK supports multiple requirements simultaneously:

Extreme-Temperature Performance
Allowing continuous operation in temperatures of 260°C and up to 300°C for short-term usage

Purity
Exceptional high purity

Chemical Resistance
Resistant to aggressive cleaning agents and processes, insoluble in all common solvents

Mechanical Strength
Excellent strength, dimensional stability and stiffness as well as long-term creep and fatigue properties

Wear Properties
High abrasion and cut through resistance combined with a low friction coefficient

Light Weight
Enabling reduced mass and lower energy consumption, improved efficiency and cost reduction

Regulatory Compliance
Appropriate food and water regulatory compliance

Environmental Friendliness
Victrex operates under an environmental management system that is certified to ISO 14001. VICTREX™ PEEK Polymers are Halogen-free*, RoHS and REACH compliant. They are chemically inert to water and pressurised steam

Hydrolysis Resistance
Low moisture absorption, resistant to steam, with low permeability

Easy Processing
1-shot injection moulding process allows for optimised part design and eliminates the need for secondary processing steps and saves labour, space, machine invest

Electrical Properties
Maintained over a wide frequency and temperature range, improved dielectric strength vs. PI/PTFE

* VICTREX™ products have been shown through type testing to meet the criteria of 'non-halogenated' as defined in IEC standard – IEC 61249-2-21.

VICTREX™ PEEK polymers can move manufacturing processes and productivity to the top of the food chain.

Chemical Resistance

VICTREX™ PEEK polymers deliver resistance for common chemicals* found in food and beverage processing.

KEY

- A — **No attack.**
Little or no absorption.
- B — **Slight attack.**
Satisfactory use of VICTREX PEEK will depend on the application.
- C — **Severe attack.**
It is recommended that VICTREX PEEK should not be used for any application where these chemicals are present.

*For the complete list of all chemicals, contact Victrex and request the Chemical Resistance brochure.

About Victrex

Victrex is an innovative world leader in high performance polymer solutions, focused on the strategic markets of automotive, aerospace, energy (including manufacturing & engineering), electronics and medical. Every day, millions of people use products and applications, which contain our materials – from smart phones, aeroplanes and cars to oil and gas operations and medical devices. With over 40 years' experience, we develop world leading solutions in PEEK and PAEK-based polymers, semi-finished and finished parts which shape future performance for our customers and our markets, and drive value for our shareholders.
